Pasture Management Information – Please answer all questions ONLY in relation to the fields that your horse/donkey grazes [if you have more than one horse/donkey and the information is the same, only complete one sheet.

Is the horse/donkey kept at home or livery?	
How long has it been there? And where was it before if less than one year?	
How many other horses/donkeys share the field with your horse/donkey?	
What worming program are they on?	
How frequently do these grazing companions change?	
How many acres does your horse/donkey and their grazing group have?	
Do they swap onto fields that other horses/donkeys have grazed or do they have individual fields?	
Is the dung collected and if so how frequently?	
What other pasture management practises are there?	
Do any other horses/donkeys ever come onto the grazing or do your horses/donkeys ever go anywhere else to graze?	
What other information do you think is relevant to the possibility of your horse or donkey becoming infected from the pasture?	

This is the information that we use to design the worming program. Any inaccuracies would invalidate the Intelligent Worming guarantee. Please advise of any changes to this information after the program has started.
